APPLICABLE ROLES / ĐỐI TƯỢNG

Sales Representatives, Sales Managers, CBO, CEO

DOCUMENT VERSION

Wine ERP v10.34 (Verified September 2026)

1. System Architecture & Role Segmentation

The **Field Sales Check-in Module** coordinates customer visits for HORECA venues (Hotels, Restaurants, Wine Bars) and independent wine retail accounts with hardware-level tamper protection.

Operational Dimension	Sales Representative (Mobile/Tablet)	Sales Manager / Director (Desktop/iPad)
Access Scope	Isolated strictly to own assigned accounts (where.salespersonId = user.id).	Enterprise-wide visibility; aggregates all field sales reps (office staff filtered out).
Primary Device	Smartphones (iOS Safari / Android Chrome) optimized with a persistent bottom bar.	Desktop browser / Laptop for executive matrix audit, photo inspection, and grading.
Hardware Triggers	Live Camera sensor + High-Precision GPS Geofencing overlay.	No camera/GPS required; pure data review, photo cross-reference, and KPI sign-off.
Core Screens	4 Tabs: Today , Weekly Plan , Summary , Photos .	Executive KPI Header + Team Plan vs. Actual Matrix + Audit Verification Drawer.

Hardware & Device Permission Setup

iOS Safari (iPhone / iPad)

1. Go to **Settings** → **Safari**.
2. Under *Website Settings*, select **Location** → Tap **Allow**.
3. Tap **Camera** → Tap **Allow**.
4. When visiting the portal, tap "Allow" on the browser prompt.

Android Chrome

1. Tap the **Padlock icon**  in the URL bar.
2. Tap **Permissions**.
3. Toggle both **Location** and **Camera** to **Allowed**.
4. Swipe down or reload the page to activate hardware sensors.

Anti-Tamper Security Standard

Browser geofencing captures latitude and longitude directly from cellular triangulation and GPS satellites. If GPS permissions are blocked, check-in submission is paused until location services are enabled.

2. Part I: Weekly Planning Workflow (Lên Kế Hoạch Tuần)

Sales representatives must commit their weekly territory coverage schedule every Monday morning or Friday afternoon.

1 Access the Weekly Plan Tab

On the top navigation or mobile bottom bar, tap **Weekly Plan** (or *Kế Hoạch Tuần*). Use the week navigator **< Week 39 >** to select the target cycle.

2 Establish Strategic Weekly Target

Enter your core operational goal into the top commitment bar (e.g., *"Introduce Chianti Classico 2020 vintage to District 1 fine dining accounts; collect overdue invoices from Q3."*).

3 Allocate Accounts to Days (Mon – Sun)

Tap **+ Add Stop** on the target day card. Today's date is automatically accented with a vibrant emerald border.

4 Specify Visit Window & Purpose

Select customer account from searchable combobox. Choose anticipated time slot (Morning / Afternoon) and key purpose (Routine, Tasting, Inventory, Debt Collection).

5 Commit & Save Itinerary

Click the green **Save** button in the top-right corner. The itinerary immediately locks and propagates to the Manager Executive Board.

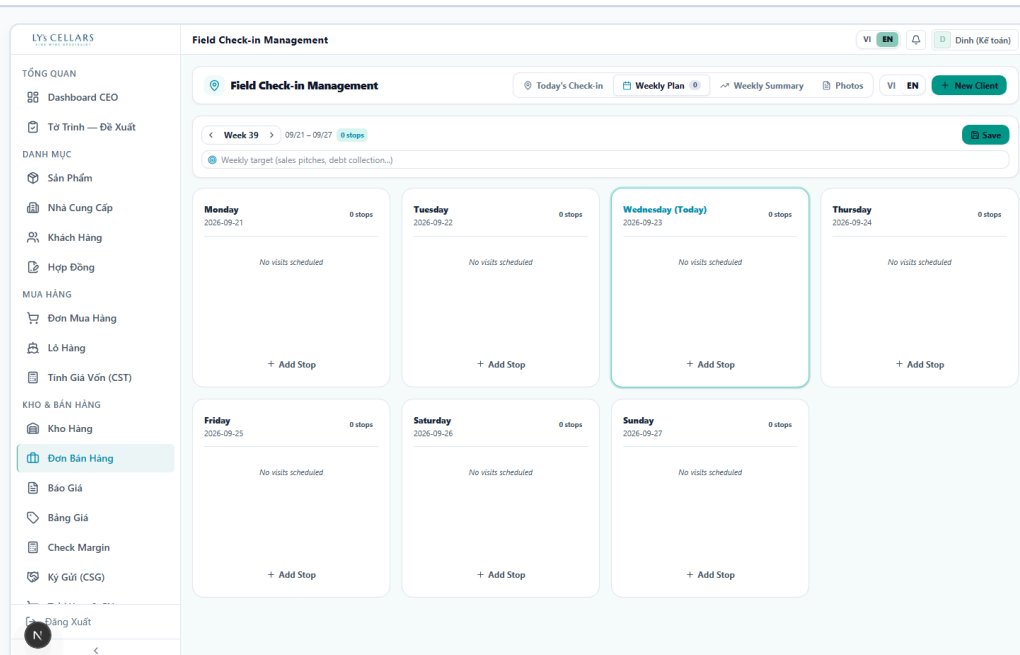

Figure 1: Real System Screenshot — Weekly Plan Schedule & Day Matrix (Mon – Sun)

3. Part II: Field Check-in Operations (Thực Hiện Check-in)

Follow the standard 5-step operational protocol when arriving at any venue or wine retailer.

- 1 **Open Today's Route on Mobile**
Tap **Today** on the bottom navigation bar. Scheduled customer accounts appear with contact details and quick-action buttons.
- 2 **Launch Route or Phone Call**
Tap **Maps** for turn-by-turn routing to the venue, or **Call** to speak directly with the beverage director.
- 3 **Tap Check-in / FAB Button**
Tap the orange floating **+ Ad-hoc Check-in** button or the client card's **Check-in Now** button.
- 4 **Capture Live Photo with GPS HUD**
Aim the camera at the restaurant frontage or wine cellar. The system overlays an encrypted green HUD: FIELD GPS VERIFIED, Coordinates, Rep ID, and Timestamp.
- 5 **Select Purpose & Complete Check-out**
Choose from 7 standard presets (Wine Tasting, Routine Care, POS Audit, etc.), enter field findings, and tap **Confirm & Check-out**.

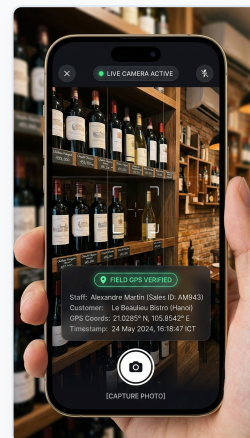

Figure 4: Live Camera HUD with GPS Watermark

Underground Cellar Offline Mode (Bền Bỉ Trong Hầm Rượu)

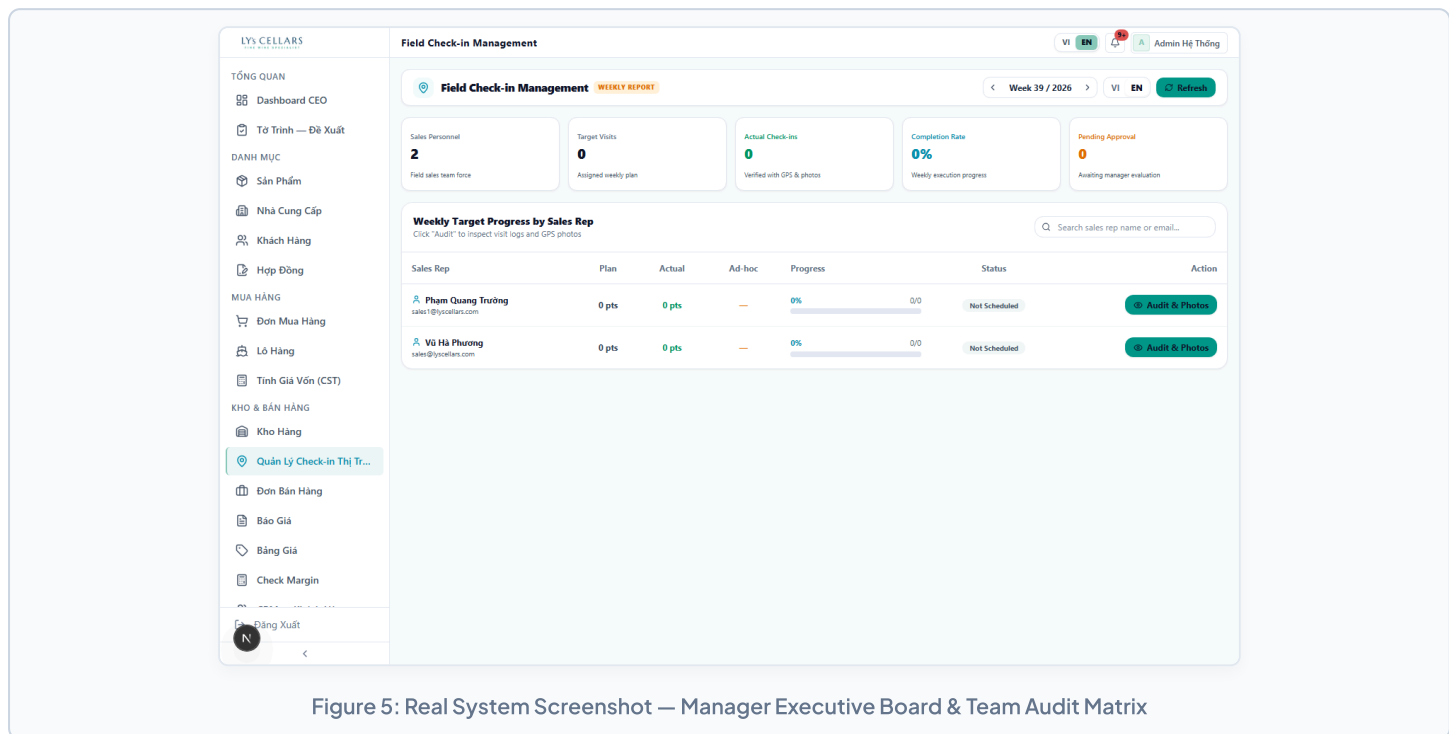

If cell reception fails in deep hotel basements or underground cellars, check-ins are cached safely in `localStorage: SALES_VISITS_OFFLINE_DRAFTS_V1`. The moment you return to 4G reception, all drafts synchronize to the cloud automatically.

4. Part III: Performance Review & Manager Oversight (Báo Cáo & Duyệt KPI)

Executives and Sales Managers use the desktop executive dashboard to monitor team execution velocity, inspect photos, and sign off on weekly KPIs.

Executive Monitoring Board — 5 Core KPIs

KPI Metric	Formula / Origin	Management Action
Sales Personnel	Active headcount with role = 'SALES_REP'	Verifies deployment of field reps; excludes warehouse and accounting staff.
Target Visits	Sum of all scheduled visit stops	Total quota committed for the active operating week.
Actual Check-ins	Count of completed, GPS-verified visits	Real-time field execution count including ad-hoc visits.
Completion Rate	$(\text{Actual} / \text{Target}) * 100\%$	Team-wide velocity gauge with real-time percentage progress bar.
Pending Approval	Count of submitted weekly reports	Alerts managers to evaluate rep performance and award final KPI grades.

Manager Audit & Sign-Off Workflow

Click **Audit & Photos** next to any sales rep to open the comprehensive inspection drawer.

- **Check-in Photos Audit:** Inspect high-resolution store photos, verifying watermarked GPS coordinates against registered client coordinates to prevent fraud.
- **Weekly Plan Audit:** Review scheduled vs. actual completed stops across each day.
- **Rep Self-Review:** Read the representative's self-evaluation notes.
- **Manager Directives:** Enter supervisory feedback and click **Save Review & Approve** to finalize.

The screenshot shows a mobile application interface for a manager's audit and feedback sign-off. The drawer is titled 'Phạm Quang Trường' and includes a 'Save Review & Approve' button. It features sections for 'Check in photos', 'Weekly plan', and 'Rep Self-Review'. The 'Sales Rep Self-Evaluation' section shows 'No self-evaluation submitted yet' and 'Not submitted'. The 'Manager Feedback' section has a text input field for feedback or notes for the sales rep.

5. Part IV: Bilingual Switching & Troubleshooting

Bilingual Language Switcher [VI | EN]

Located in the top header bar, the [VI | EN] pill toggle enables immediate interface localization:

- **Instant Client-Side Switch:** Zero page reload, zero latency.
- **Data Preservation Guarantee:** Customer business names, sales rep field notes, and manager directives are strictly preserved in their original form and never modified by machine translation.
- **Session Memory:** Saved into localStorage: `sales_visits_locale` across sessions.

Field Troubleshooting Guide (Khắc Phục Sự Cố Thường Gặp)

Symptom / Error	Root Cause	Corrective Action
Camera screen is black	Another app (Zalo, native camera) is locking hardware.	Force-close other apps, check browser permissions, and refresh page.
Red "No GPS coordinates" banner	Phone Location is disabled or blocked by high-rise concrete.	Swipe down quick settings, turn on GPS, step toward a window, and tap <i>Refresh GPS</i> .
No 4G in hotel basement	Cellular dead zone.	Proceed with check-in. It will buffer offline and sync automatically upon return to surface.
Accountant missing from Manager board	Role filtering active.	System intentionally filters only field sales reps (<code>role = 'SALES_REP'</code>) to keep metrics clean.
